Objective

The Community Insight Survey for Afghanistan Cash-Based Programs initiated by iMMAP Inc. is a pioneering effort aimed at enhancing cash-based humanitarian assistance programming. This survey, which is part of iMMAP Inc.'s primary data collection activities, is designed to inform the Cash and Voucher Working Group (CVWG) about the community's perception towards cash programmes.

Sampling

The sampling strategy for the study was intricately designed to reflect the unique geographical characteristics of Afghanistan, targeting four pseudo regions: Central, East, North, South, and West. The majority of the records were concentrated in the top five provinces—Herat, Balkh, Nangarhar, Kunar, and Kabul—which accounted for **58%** of the total submissions.

Recommendations

Focus on Comprehensive Support

In addition to cash assistance, integrate complementary support such as food distribution, healthcare services, and shelter materials to address the holistic needs of the communities.

Customized Aid Programs

Design cash assistance programs that are flexible and responsive to the varied needs and preferences of different regions and communities. This includes considering one-time large payments versus smaller periodic payments, and adjusting the timing of disbursements to align with local events or needs.
