# Information Management Support to Sectors Under GIFMM in Colombia

## Context

Nearly 2.9 million Venezuelan migrants and refugees have fled to Colombia in recent years, with the crisis in Venezuela showing no signs of resolution. The continuous influx has led to the expansion of informal settlements, intensifying the need for coordinated humanitarian responses. The Response for Venezuela (R4V) and the Mixed Migration Flows Interagency Group (GIFMM) were established in November 2019 under the Refugee and Migrant Response Plan (RMRP) for 2020. This strategic framework is crucial for synchronizing efforts across various sectors, including Food Security and Nutrition (led by WFP, FAO, and UNICEF), WASH (UNICEF and Action Against Hunger), Education (UNICEF, NRC, Save the Children), Socio-Economic Integration (IOM, UNDP, PADF), and Health (PAHO/WHO, Ministry of Health). Within the GIFMM framework, these sectors are supported in tasks related to the RMRP program cycle, including reporting and analyzing multi-sectoral needs assessments.

**Donor:** US Department of State / Bureau of Population Refugees and Migration (BPRM)

**Current project:** Information Management Support to Sectors Under GIFMM in Colombia

**Project budget:** USD \$3,668,847 (3 Years)

**Number of partners iMMAP currently supports:** 74 GIFMM members and 34 NGO Forum members

## Objectives

Deliver Information Management (IM) products for monitoring and oversight in humanitarian responses, enhancing coordination between GIFMM and the NGO Forum through the development of online tools.

Offer training on innovative data collection tools and best practices in IM and administration, tailored according to insights gained from ongoing learning assessments.

## Key results - Year 3

Information products published

Organizations using information products

Usefulness ratings for information products

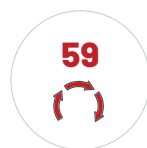

Communities supported with IM

People supported in communities with IM

People took our community-based IM trainings

Organizations supported sectorally for the RMRP

IM products published in support to the RMRP

IM modules launched in 2023

People trained on IM

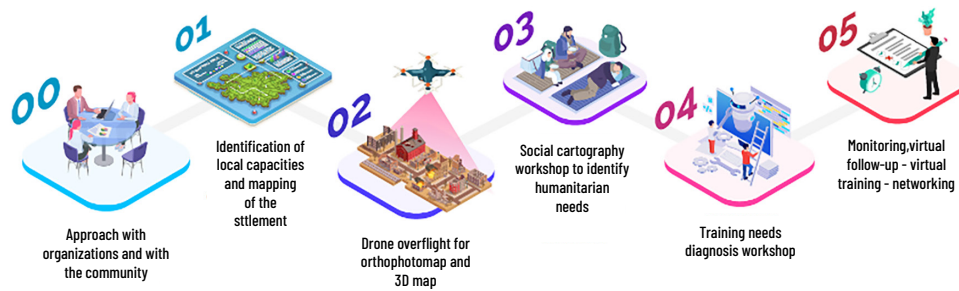

Improvement in knowledge on IM after trainings

# Community-Based Information Management

Humanitarian planning in the country requires more comprehensive data to make strategic decisions, humanitarian actors need more local information to make operational decisions. In settlements and often do not have the settlement-level information to sample planning and response.

Drawing on the Community-Based Approach and OSM field documents, we propose a methodology for needs assessment, monitoring the response at the local level and linking the affected population to the IM process.

## iMMAP Inc. Colombia

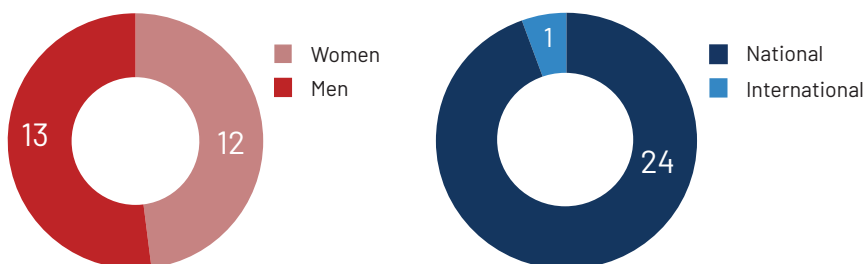

iMMAP Inc. has been delivering information management (IM) services to different actors in Colombia since 2008.

Currently, iMMAP Inc. provides services to coordination spaces including the Humanitarian Country Team (HCT), the Inter-Agency Mixed Migration Flows Group (GIFMM).

In coordination with the GIFMM, the current project provides services support to the Education, Food Security and Nutrition, Health, Socio-Economic Integration and WASH sectors, as well as the INGO Forum.
