

HUMANITARIAN DATA LITERACY

iMMAP Inc. is launching a new Data Literacy capacity strengthening programme, aiming to bolster the use of data in humanitarian and development organisations across Afghanistan.

All individuals working in humanitarian and development organisations and agencies across sectors and regions of Afghanistan are invited to contribute to the design of the programme.

Tailored for both programme and technical professionals in Herat, Kunduz, Mazar-e Sharif, Kandahar, and Jalalabad regions.

Offered as in-person training, as well as facilitated and self-paced online learning, from fundamentals to advanced level.

The participation of national staff and Local NGOs/CSOs, is prioritized, engendering local ownership and leadership.

Participation and contribution from clusters, sub-clusters, working groups (I)NGOs & UN agencies is also encouraged.

Cash-support will be offered to eligible NGO/CSO participants, to promote inclusive participation.

iMMAP Inc. will launch a learning platform for the humanitarian community in Afghanistan.

The importance of data literacy - the ability to **understand, interpret, analyze, and communicate** data - cannot be overstated.

Humanitarian actors harness data to identify, analyze, and visualize the needs of affected populations.

Data literacy is critical to ensure evidence-based, measurable, and accountable action.

It empowers organizations and individuals to make well-informed decisions, ultimately, improving the lives of those affected by crises
