16.9 million people (45% of the total population) are estimated to be in crisis and emergency levels of food insecurity in early 2021.

40 years of war, recurrent natural hazards, increasing poverty, and COVID-19 are devastating the people of Afghanistan.

Winter precipitation was the lowest in 40 years and low precipitation and above average temperatures are forecast. With the spring drought the food security situation will further deteriorate.

18.4 million people projected to be in need of humanitarian assistance in 2021.

Donor: USAID
Years of presence in Afghanistan: since 2010
Current project: Humanitarian Information Management for Natural Hazard Emergency Response in Afghanistan (HIM-NHER)
Project budget: USD 3,063,000
Number of partners iMMAP currently supports: 95

Funded by USAID, iMMAP has been actively operating in Afghanistan since 2010.

iMMAP delivers information Management (IM) products and services to key partners in Humanitarian Response and Disaster Risk Reduction (DRR), including but not limited to humanitarian clusters, USAID implementing partners, OCHA, the Afghan Government, and civil society.

We work towards ensuring that data consistency and standardization is integrated into all systems for a more efficient and cost-effective emergency response by all humanitarian actors.

Better Data, Better Decisions, Better Outcomes
Information management services: iMMAP provides ad-hoc IM support to all the humanitarian clusters for specialized tasks.

ReportHub: ReportHub is an online reporting platform that addresses the gap in reporting operational data across organizations by streamlining the information flow between clusters, working groups, partners, and the Humanitarian Country Team in support of the Humanitarian Response Plan.

COVID-19: Within the framework of ongoing support, iMMAP is assisting the clusters and cluster members to monitor the COVID-19 response through ReportHub and providing our partners with remote IM assistance.

Afghanistan National Disaster Management Authority (ANDMA): iMMAP provides close support to ANDMA through capacity building to enhance ANDMA’s DRR activities, mapping, and IM. iMMAP is also providing surge capacity support to ANDMA by seconding 13 national IM experts.

Afghanistan Natural Hazards Data Center (ANHDC): The ANHDC is a geospatial platform developed by iMMAP for ANDMA that provides critical information to line ministries and aid organizations for DRR, planning, and emergency response.

Capacity building: Through our internship program, specialized training, workshops, and knowledge sharing activities tailored to the needs of our partners, we empower humanitarian stakeholders and national capacities to reach a professional understanding of the principles and best practices of IM in humanitarian and DRR contexts.
