Colombia is suffering the consequences of multiple humanitarian emergencies. The current situation with Venezuelan migrants arriving in ever increasing numbers has drawn global attention, along with its long-running armed conflict and violence, as well as natural disasters.

**5,000 Venezuelans enter Colombia daily**
(Until the beginning of the border closure)

IMMAP has been delivering information management services to different actors in Colombia since 2009. Currently, we provide services to coordination spaces including the Humanitarian Country Team (HCT), the Inter-Agency Mixed Migration Flows Group (GIFMM in Spanish) and the Health Sector.

In coordination with the GIFMM, the current project provides services to the Health, WASH, and Food Security and Nutrition (FSN) sectors, as well as the INGO Forum. Since March 2020, iMMAP actively supports the COVID-19 response plan, led by OCHA and the Pan American Health Organization (PAHO).

**IMMAP Information Management to support to Colombia**

- Years of presence in Colombia: **Since 2009**
- Donor: **USAID OFDA**
- Current project: **Information Management to support to Colombia**
- Project budget: **USD 1,273,000**
- Number of partners iMMAP currently supports: **66**

**19**
Number of staff

- **Women**: 9
- **Men**: 10
- **National**: 1
- **International**: 18

Better Data, Better Decisions, Better Outcomes
The project goal is to assist the humanitarian community, and especially our key partners such as the Health, WASH and FSN Sectors and the INGO Forum, with accurate, relevant, and timely information for humanitarian coordination, humanitarian access, and disaster risk emergency response management in collaboration with relevant coordination spaces.

COVID-19 Response:
iMMAP brings support to The Pan American Health Organization (PAHO) in its role with the Health Cluster and directly in tasks related to the elaboration of the new COVID-19 Plan. In addition, through the Health Cluster iMMAP is providing information systems support to the two co-leads, the Ministry of Health and PAHO, in order to collect data on healthcare system capacities throughout the country. Furthermore, iMMAP provides planning support related to COVID-19 to water, sanitation, food security and nutrition sectors, as well as to the Colombian Forum of International NGOs.

Project Deliverables

Coordination:
- IMWG technical secretariat and participation
- INGO Forum IM strategy implementation
- Support to sector and INGO coordination through information management
- Support for joint needs evaluations

Information Management:
- Sectoral IM support to the RMRP 2020 cycle
- Sectoral IM support to the RMRP 2021 process
- Support for joint needs evaluations
- Evaluation and monitoring
- Support for data access

Sectors supported

- Health
- Food Security
- WASH
- Coordination

Information Products:

Maps - a series of maps of the results of all PIN and 4w data.

Infographics - a consolidation of one monthly infographic of the situation. A specific health data infographic produced every other month.

Facebook Data - biweekly updates to migration information based on Facebook data.

HDX repository access - upload data into HDX based on the results each quarter for sectoral data and all information which can be published.

Geoportal - developing a platform that provides access to and the visualization of relevant, timely and functional geographic information on the situation of the Venezuelan refugee and migrant population.

IM Processes and Services:

HDX training and upload of third party data HDX visualizations: in coordination with the HDX team, design visualizations for the Venezuela crisis.

Publication over r4v.info: full management of 4w data collection process, including information on activities related to the Venezuela response.

Detection of New Settlements: aiming to develop a model for fast and scalable settlement detection in Colombia using a combination of artificial intelligence and satellite imagery.

1005 downloads of HDX datasets

5351 downloads of r4v.info products
