The first task order, Business Competitiveness and Job Creation Initiative (BCJCI), will work with local businesses, business associations, and other stakeholders to expand existing businesses, and identify and address obstacles to creating and growing business opportunities. BCJCI will help Iraqi companies create new jobs and contribute to the economy by carrying out these objectives:

1. Business growth and competitiveness of targeted firms to increase job creation.
2. Capacity of trade and business counselors to identify, address and remove constraints to business growth and strengthen competitiveness.

The 100 Solutions for Stability Task Order will support leaders and their communities in identifying, understanding, and mitigating the drivers of conflict. This Task Order will support communities in overcoming these conflicts and building resilience by following these defined objectives:

1. Community capacity to identify conflict drivers and increase solutions.
2. Cultivate diverse partnerships, community leadership and enhance resource mobilization.
3. Strengthening the social and economic recovery of victims of conflict.

iMMAP’s support has been and will continue to be critical to the planning, implementation and monitoring of these two task orders throughout the five-year project.

Key Deliverables

iMMAP’s contributions to the DCEO Iraq project are divided into four different capacities: Data Systems, GIS, Field Operations and Research and Analysis.

**Research and Analysis (R&A)** provides input and triangulation for DCEO deliverables such as thematic assessments, provincial summaries, and engagement recommendations for implementation plans. The R&A Unit also has a set of deliverables in the form of Area Profiles which will provide vital contextual knowledge of the areas of implementation for partners and donors.

**Data Systems** is immersed in the designing and hosting of the project-specific web portal and dashboards, along with a documents repository that houses in-depth reports and updates. The dashboard will allow partners, donors and others to track past and ongoing activities.

iMMAP’s **GIS** team provides maps and visualizations supporting DCEO regular reporting documents as well as vital deliverables such as thematic assessments, implementation plans, and area profiles.

**Field Operations** manage field teams in support of DCEO data collection, including those supporting the efforts of partners and iMMAP’s Research and Analysis. These efforts supported the Whole of Iraq Political Economy, Conflict, and Gender baseline assessments. The field operations team continues to support data collection efforts in coordination with the R&A unit.
