Groups of ISIS militants are still present in these areas, which pose a major threat to humanitarian operations. The RMIMC collects, analyzes, and reports security and explosive hazard incidents-related information, which facilitates security coordination, safe access, and coordination of humanitarian organizations working in the liberated areas from ISIS.

Main objectives of the project:

The objective is to improve the accessibility of humanitarian organizations to hard to reach areas including areas retaken from armed actors and newly accessible areas, provide risk information to affected communities about explosive hazards threatening their movement, and improve the humanitarian organizations’ quality of information management and data visualization techniques.

Project duration: 1 Year
Donor: Iraq Humanitarian Fund (IHF)
Current project: Risk Mitigation Information Management Center
Cluster: Common Coordination Services (CCS)
Project budget: USD 743,833

15 Number of Personnel
Women: 6
Men: 9
National: 1
International: 14

Better Data, Better Decisions, Better Outcomes
Activities and Accomplishments

Raising Risk Awareness: collaborating with Spirit of Soccer (SoS) to conduct safety awareness sessions for other NGOs working in liberated areas from ISIS, to improve access of humanitarian workers and protection of affected populations in areas at risk, through increasing information sharing on hazard risks, safety, and security.

Capacity Building: training NGOs on data collection and visualization methodologies and on the usage of mobile data collection tools which are managed by iMMAP and used by the humanitarian actors (HAs), to ensure that data collection and data sharing are done directly by actors present on the ground, to avoid duplication of efforts and resources.

COVID-19 Contingency Activities: Continuing the capacity building activities amid the COVID-19 lockdown by providing real-time remote training sessions for humanitarian actors in Iraq on the information management cell, data collection tools and methodologies, dashboard creation, and data visualization.

Data Collection: collecting data through reliable open source and media research and the secondary data shared by mine action actors through the information sharing agreement between iMMAP and the National Mine Action Authorities.

Data Analysis: Providing information on areas that are not yet surveyed by Humanitarian Mine Action Actors, through advanced data analysis using the latest satellite images, and integrated desktop surveys.

Information Sharing: regularly providing detailed IM situational maps, online real-time dashboards, snapshots, infographics, and situation reports on areas around the camps, areas of humanitarian response, and routes frequently used by humanitarian actors (HAs), returnees, and internally displaced people (IDPs).
